

Milk a healthier profit
with ADF

Winner

Welcome to **ADFmilking**

The Automatic Dipping and Flushing system is an award winning product that is helping farmers improve the health of their herds. It saves time and increases the efficiency of the milking parlour.

Find out how **it could help you** 

Saves you **time**

Traditional post-milking routines are not only time consuming but disruptive to milking and can be prone to human error.

By automating the dip and flush process ADF's simple and robust system automatically applies 'dip' (emollients and sanitiser) to cows' teats immediately after milking. The teat cups are then automatically rinsed and disinfected ready for the next cow.

www.ADFmilking.com/process/research

Because ADF is designed to further automate the milking process you can make substantial time savings and increase parlour efficiency.

Helping reduce **mastitis**

The benefits of ADF start immediately post milking
- with perfect timing.

The open teat canal, after milking, is protected from infection in an instant, dramatically reducing the risk of negative pressure drawing bacteria into the teat canal.

Cross contamination between cows is controlled because the milking unit is automatically sanitised between each milking. Every teat, on every cow, at every milking benefits from clean liners (inflations).

Not only does this save money, but more of the milk produced is sold and less time is spent treating mastitis.

www.ADFmilking.com/benefits/health

Overall herd health improves
as healthier cows move up
through the herd.

Saves you **money**

The ADF system is becoming a must-have for modern dairy farmers looking to increase efficiency and profitability.

ADF reduces the need for extra labour costs in expanding farms (by further automating the milking routine) enabling farms to be more cost-effective.

By removing the need to dip liners and flush the clusters manually you maximise parlour throughput and concentrate on the important business of milking.

With the double action of keeping your cows healthier and keeping your labour costs under control you'll start to see the benefits of using ADF where it matters most - in your pocket.

www.ADFmilking.com/calculator.php

Reducing time in the milking parlour and keeping your herd healthy adds up to massive financial savings.

Flexible **solution**

On many farms the milking parlour rapidly becomes a 'pinch point' in daily routines. More cows means more time spent milking - putting pressure on other jobs, which can lead to problems.

ADF is easily installed on any make or type of milking parlour, either new or existing. Installation is carried out between milkings with the minimum of disruption to your routine.

ADF's system is very flexible, and built in the knowledge that all farms are different.

www.ADFmilking.com/benefits/flexible

ADF completes the milking process.

Leading **technology...**

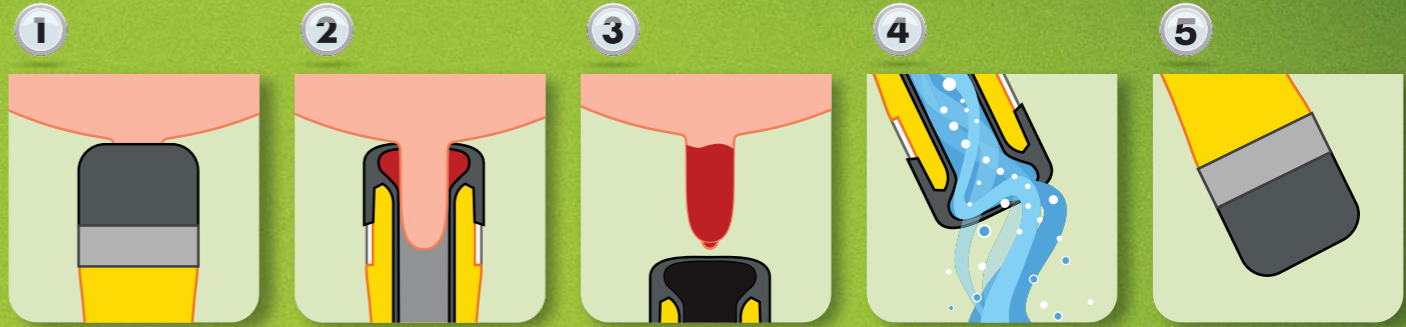

ADFmilking's award-winning product is the first to introduce a system that fully automates the dipping of cows' teats and flushing of liners.

Find out how our product works.

Subject to multiple patent applications.

www.ADFmilking.com/process/documentary

five **easy steps**

1 End of milking - the process starts

At the end of milking as the vacuum is shut off, teat dip is injected into a manifold on the clawpiece.

2 Dip is applied to teats

Teat dip is applied to the teat as the teat cup is withdrawn by the ACR.

3 Teat dipped and protected

Within seconds of milking being completed, teats are coated with dip.

4 Cleaning process commences

After removal every liner is disinfected and thoroughly rinsed.

5 Cluster ready for next cow

Teat cups are clean and ready for the next cow. **All in 20 seconds!**

What could **you save?**

Visit our website and you could work out for yourself just how much the ADFmilking system could save you.

We've created an online calculator especially for you. It takes into account your herd size, parlour type, amount of dip used, time spent milking and many other aspects of your milking routine. We'll even send you a detailed report showing you how we arrived at the results. **Try it!**

Need **more information**
