

# Theraspray Red

Chlorhexidine based teat spray

---

## PRODUCT DESCRIPTION

*Theraspray Red* is a low foam red liquid suitable for use as a teat dip or spray on dairy cattle. *Theraspray Red* incorporates the antibacterial action of Chlorhexidine to help prevent the spread of mastitis in dairy cattle. It also incorporates an added emollient to maintain teat condition.

---

## FEATURES & BENEFITS

- Chlorhexidine has excellent rapid antibacterial action against Gram Negative and Gram Positive bacteria. It is very effective against environmental pathogens such as E. Coli, S. Uberis and S. Equinus.
- Easily dilutable and stable once diluted
- Non-Staining – no iodine.
- Does not irritate teats
- Contains glycerine and mixes readily with additional emollients.
- Non-hazardous.

---

## PROPERTIES

|                   |                  |
|-------------------|------------------|
| Appearance:       | Clear red liquid |
| Specific Gravity: | 1.02-1.04        |
| pH (undiluted):   | 5.5-6.5          |

---

## TO USE

*Theraspray Red* is diluted 1 part to 10 parts of clean, soft water, giving a Chlorhexidine concentration of 0.5%. Additional emollients such as Glycerine or Sorbitol can be added to replace up to 10% of the water during cold, wet, windy conditions.

**Spray** - For any approved germicide to be effective, the Milker must assure that the spray is applied to the teats from directly below and that the entire teat barrel is covered so that a drop of *Theraspray Red* collects at the teat end.
