

# TAIL PAINT CATTLE MARKER

AVAILABLE FROM

BENEFITS

- Low Irritant
- Weather Resistant (up to 10 days)
- Bright Colours
- Long Lasting
- Easy to Use

# TAIL PAINT CATTLE MARKER

## DESCRIPTION

DAIRY POWER Tail Paint is a non irritant and weather resistant cattle marker formulated for the beef and dairy industries. Tail Paint provides bright, easy to see colours for identification in all weather conditions. Cleantec Tail Paint is suitable for both heat detection and animal identification.

Tail Paint is available in the following colours:  
Green, Blue, Yellow, Red, Pink, Orange

## FEATURES & BENEFITS

- Well designed spray nozzle that reduces blockage
- Brilliant colour range
- Non irritant
- Weather resistant (colour holds on cattle 7-12 days)
- Good coverage with single pass application
- Writable
- Cleantec Tail Paint can holster available (keep cans in convenient location)
- Australian manufactured
- Priced competitively
- Distinctive designed black can
- Cartons 12 x 500ml cans

## DIRECTIONS FOR USE

### Heat Detection

The cow should be clean and dry before applying paint. Shake can well and then spray a strip 15cm (6 inches) long and 5cm (2 inches) wide along the spine from the head of the tail. Spray against the lay of the hair. Rubbing or removal of the paint patch indicates oestrous activity.

Do NOT use on sheep.

Store below 49°C. Do not store in direct sunlight.

## MATING MANAGEMENT PROGRAM

For efficient management of a herd's reproduction program it is suggested that farmers use this colour coded system commonly used on dairy farms:

1. Red. Paint cows red after they have calved to indicate the cow has started to cycle again. Cows that have not cycled can be identified for veterinary attention.
2. Green. Paint cows green immediately before beginning an AI program to identify cows that come into heat and are ready for insemination.
3. Blue. Paint cows blue immediately after insemination. This shows the cows that have been inseminated.
4. Yellow. Paint cows yellow that have been confirmed pregnant.

## CATTLE IDENTIFICATION

Use Red paint for the cows that have a withholding period due to treatment with drugs.

Use Green paint for cows that are clear of their withholding period.

Note: Other colour choices may be preferred such as Blue, Orange, Pink or Yellow due to colour blindness or visibility issues on particular cattle breeds.

## PACKAGING

Ctn (12 x 500ml) Green P/C 7866006

Ctn (12 x 500ml) Blue P/C 7864006

Ctn (12 x 500ml) Yellow P/C 7863006

Ctn (12 x 500ml) Red P/C 7865006

Ctn (12 x 500ml) Pink P/C 7861006

Ctn (12 x 500ml) Orange P/C 7862006
