

# Animal Drafting - Milking Shed Sorting

Want to sort your herd effectively without a lot of effort?  
Don't want to keep drafting out animals manually?

GEA can offer you various systems for automatically drafting individual animals or groups of animals efficiently, quickly and reliably.

GEA drafting gates are reliable, fully automated gates controlled by the DairyPlan C21 software. Drafting reasons can be entered into the software to automatically separate the cows that meet the user-defined conditions, as well as allow cows that might be noticed as needing attention during milking to be drafted once off.

Animal sorting is made simple with AS5000.
