

GEA COW BRUSHES – WELLNESS FOR YOUR HERD

Increase the health of your animals, improve
their milk yield and give them variety.

IMPROVED ANIMAL HEALTH

Your animals, your responsibility.

It is natural for cows to scrub and scratch themselves. With the new cow brush portfolio from GEA, you offer your herd the ideal opportunity to groom themselves and thus make a significant contribution to general animal hygiene. A healthy animal is a happy animal!

IMPROVED MILK YIELD

Healthy cows and more milk are your added value.

By brushing and massaging large areas, cow brushes increase well-being. Stress is reduced, blood circulation is improved and the release of heat is promoted – all of which has a positive effect on milk yield.

VARIETY AND ACTIVITY

More fun for your herd, more benefit for you.

GEA's cow brushes provide a pleasant change of pace in the barn. They keep your herd busy and banish boredom. In addition, brushing and massaging improves the blood supply to the skin, which stimulates the metabolism.

SMART, SAFE AND SIMPLE

Technology that protects you and your herd.

The GEA cow brushes offer safe and injury-free operation. The integrated sensor prevents the tail hair from being pulled in and switches the brush off automatically. The intelligent electronics ensure trouble-free operation and the clearly visible display allows flexible adjustment of the brush running time. Safety features such as the torque-dependent switch-off and the main emergency stop switch ensure maximum safety in the barn.

Our cow brushes are easy to install and practically maintenance-free. Simple lubrication and timely replacement of the brush rollers increase the service life. Also suitable for outdoor installation under a canopy.

THE RIGHT LOCATION

The well-being of your cows is in your hands.

Choose the location of the cow brushes carefully. Place them in areas with plenty of space so that other animals can pass by easily. Avoid dead ends and dark corners. Position them far away from feeding and drinking areas to minimize soiling.

GEA Duo

Thanks to the 2-brush system, the brush reaches all parts of the cow's body and exerts a pleasant counter-pressure.

GEA Maxi Free

The vertically oscillating brush does not require a motor. The brush allows your herd to adjust the cleaning and massage intensity itself and is also ideal as an activity material.

GEA Maxi Swing

The special arrangement of the brush in a vertical direction makes it easier to clean the fur on the torso and head, as the brush rotates in every direction and at almost every angle.

GEA Midi Swing

The vertical arrangement of this brush makes it easier to clean the head and torso thoroughly. The GEA cow brush Midi Swing is suitable for cattle over one year of age and adult cattle.

GEA Uno

The diagonal construction allows the cow to clean her back and flanks. The firm installation exerts a pleasant counter-pressure that cows love.

COW BRUSHES – A MUST FOR YOUR MODERN BARN

Cow brushes are an essential contribution to the welfare of your animals. Ensure health, hygiene and satisfaction – choose GEA cow brushes!
